Johnson Controls expands Tyco® Series LFII Concealed Pendent Sprinkler offering

New intermediate sprinkler designed for residential spaces where ambient temperatures may reach 150 F (66 C)

MILWAUKEE – (February 26, 2019) – Johnson Controls is now offering its Tyco® Series LFII Residential 4.9K Concealed Pendent Sprinkler in an intermediate temperature rating. The intermediate temperature model provides greater flexibility when installing sprinklers near potential heat sources. It also helps meet recent demand by home builders and contractors, as well as new mandates set by local authorities in some regions prone to higher ambient temperatures.

The new LFII intermediate temperature sprinkler features a reduced cover plate gap, creating a more appealing aesthetic for builders and homeowners. The flat cover plate conceals the sprinkler’s operating components above the ceiling for a visually pleasing design in homes, apartments and dormitories.

“This new intermediate temperature sprinkler is ideal for wet pipe systems in residences located where ambient temperatures can exceed the maximum rating for ordinary temperature sprinklers,” said Hilary Reese, global product manager, Johnson Controls. “In fact, an increasing number of jurisdictions are now requiring residential sprinklers to be rated for intermediate temperatures to help optimize system dependability.”
Tyco Series LFII Residential Concealed Pendent Sprinklers are designed with heat sensitivity and water distribution characteristics proven to help control residential fires and improve the chance for occupants to escape or be evacuated. This sprinkler satisfies residential portions of any occupancy per NFPA 13, 13D and 13R.

For additional information on the LFII Residential 4.9K Concealed Pendent Sprinkler, including the technical data sheet and installation guidelines, visit www.Tyco-Fire.com/IntermediateTemp or contact your local Johnson Controls fire suppression products representative.

About Johnson Controls
Johnson Controls is a global diversified technology and multi-industrial leader serving a wide range of customers in more than 150 countries. Our 120,000 employees create intelligent buildings, efficient energy solutions, integrated infrastructure and next generation transportation systems that work seamlessly together to deliver on the promise of smart cities and communities. Our commitment to sustainability dates back to our roots in 1885, with the invention of the first electric room thermostat. We are committed to helping our customers win and creating greater value for all of our stakeholders through strategic focus on our buildings and energy growth platforms.
